

Environmental Policy

The beliefs that guide us in our business are:

- Work with organisations to inspire and implement big solutions to the environmental crises.
- Do more with less. Provide products and systems with sustainable attributes - designed for long life operation; requires little or no maintenance; repairable and serves more than one purpose.
- Prevention. Treat the cause rather than the symptom of an issue. Prepare people for issues before they happen.
- Improve our internal workflow to directly reduce emissions through the following actions:
 - Move product by sea and rail rather than by air
 - Deliver services remotely rather than travel to job locations
 - Employ local people for distant job locations rather than travel

By embracing these beliefs, we will:

- Lower the environmental impact from business on the planet's resources to a sustainable level
- Achieve a performance which will organically grow the long-term success of the business
